

# ABSTRACT

1    An aircraft component including a first section adapted  
2    to be attached at an exterior surface of an aircraft to  
3    close an access opening through the exterior surface; and  
4    a second section extending outward from the first section  
5    and forming heat transfer surfaces to transfer heat from  
6    the first section to air passing by the exterior surface  
7    and second section during flight of the aircraft. The  
8    first and second sections are integrally formed as a one-  
9    piece member.
